

Ford US Daily Historical Database, File Specifications

General

- The Ford US Daily Historical Database consists of daily updates on 242 variables including Ford proprietary model scores, cleaned fundamental data, financial ratios, income statement, balance sheet and cash flow data.
- Meets the same unique standards for back testing as the Ford monthly historical data bases.
 - **No lookahead bias**, Ford stores data as of the date it was reported.
 - **Never restated**, historical data is never restated by Ford.
 - **No survivorship bias**, the database includes all companies covered by Ford at any point in time.
- Daily history for the Ford Standard US Universe starts 9/18/2002.
- Offered as a one time file and complete refreshes are available at an additional cost.
- The file size for the full database is about 400 Megabytes zipped, and will be delivered on CD. Clients need to be equipped to open and manipulate large files (will not open in Excel).

Options

Adjustment Option

You may select to have the per-share valuations and the shares-related variables adjusted for splits and spin-offs. Unadjusted files do not contain a split factor for adjusting.

Formatting

Extract files are formatted in ASCII text.

File and Record Layout

The Ford US Daily Database Extract file is sorted in ascending order by issue ID, and within issue ID by record date. The first two fields of each record can be used as the primary key for a relational database table:

1. Ford invariant issue ID [an integer]
2. Data record date, in international date format **YYYY-MM-DD**

The two key fields are followed by two hundred forty two [242] variables of the database, for a total of two hundred forty four [244] fields per line. Missing values are represented as nulls, i.e., no text appears between the delimiters. Records are separated with the Microsoft Windows EOL sequence, CR-LF (Hex: '0D0A').

Following is a symbolic representation of the extract file, ignoring the type of delimiter actually used, with angle brackets (<>) representing a delimited field and an ellipsis (...) representing a sequence of information not shown.

Notes:

1. The first two fields of each line are the primary key for the history extract: Ford UID [a serial number] and record date, expressed in international date format **YYYY-MM-DD**
2. Financial statement date variables [balance sheet date, fiscal year dates, etc.] are expressed as **YYYYMM** [with no separator]
3. Full date variables [EPS update date] as expressed as **YYYYMMDD** [with no separator]
4. Fields 238 through 244 [PRV2, VEI2, PRM2, EMO2, SMO2, PMO2, and VMO2] are calculated relative to the ADR Universe. For issues not in the ADR universe, these fields will be null.
5. Column P of the table is “Periodicity” of the underlying data. All data are sampled daily using the last reported value between changes.
 - 5.1. “A” = annual
 - 5.2. “Q” = quarterly
 - 5.3. “M” = monthly
 - 5.4. “W” = weekly
 - 5.5. “D” = daily
 - 5.6. “E” = event [irregular period]
6. Column A of the table is “Adjustment type” [blank = not adjusted], used only when an adjusted extract is requested.
 - 6.1. “P” = per-share, adjusted for splits but not spin-offs
 - 6.2. “S” = shares, adjusted for splits but not for spin-offs
 - 6.3. “F” = per-share, fully adjusted for splits and spin-offs
